

HOW TO SAVE ELECTRICITY

- proper lighting (natural) and ventilation
- use light dimming
- upgrade to energy efficient appliances
- integrate other energy sources.
- geyser control
- how much of the electricity goes where?
- how much electricity does the fridge use?
- what is the current usage rate?
- how much does the AC consume?
- can we use water cooler instead?
- unplug devices when not in use.
- using candle light (dinners & stories)
- use auto-switch off energy efficient long lasting lights
- reduce reliance on appliances
(like to use clothesline, instead of dryer)

- do all baking in one go (batching)
- chop food by hand instead of using food processor
- use less hot water
- use the air conditioner sparingly
- limit tv time (use radio instead)
- use renewable energy
- be efficient with refrigeration
- take shorter shower
- use task lighting
